Web Interaction & Animation

December 10th, 2014

Presentation Assignment

During my research on AniJS I came to the realization that there were not enough information on this library. So in keeping up with the course logistics of Animation I was intrigue to explore AniJS to the best of my abilities.

I created a tab bar as I feel that these types of bar could be incorporated into a menu/navigation bar, which would be useful in future projects.

I always like using accordions, and wanted to see what and how I could achieve this using AniJS.

Animating images are always fascinating to me, and I have always used designing programs to create them. But, I wanted to see how versatile using commands could be, I still have not achieved close to what I envision AniJS capabilities.
